PROFESSIONAL SUMMARY

Full-stack engineer who enjoys building backend systems in Go and turning messy requirements into reliable, working software. I've shipped real-time features, financial workflows, and production APIs from scratch, and I care as much about clean data models as I do about interfaces people actually want to use.

TECHNICAL SKILLS

Languages: Go, Python, Java, JavaScript/TypeScript, SQL, Dart.

Frameworks: Gin, Spring Boot, React, Next.js, Vue.js, Flutter.

Tools & Practices: Git, GitHub, Docker, CI/CD, REST API Design, GraphQL, WebSockets, Authentication, Payment Integrations, Peer Collaboration.

Databases: PostgreSQL, MySQL, SQLite.

WORK EXPERIENCE

Zone01 Kisumu

Kisumu, Kenya

Full-Stack Engineer

January 2026 – Present

- Shipped 3 full-stack applications in 6 months, taking each from a blank repo to a working, demo-ready product.
- Built 4+ real-time and social features (live chat, notifications, follower graphs) and owned schema design, migrations, and query tuning across the stack.
- Debugged and resolved 20+ issues through code review and testing, working directly with teammates in a peer-review workflow.

Dowell Research

Software Engineer (Flutter Developer)

March 2023 – March 2024

- Shipped 8 Flutter features to production over 12 months with zero critical bugs post-release.

PROJECTS

[ApplyCanary](#) — *Smart job application tracking assistant*

- Built an application-tracking platform to manage and monitor job application pipelines, with structured data persistence and automated background status checks.
- Designed an interactive dashboard for tracking applications end-to-end, from submission through outcome.

[LishePay](#) — *Campus meal escrow & micro-finance platform*

- Designed and built a 4-party campus meal escrow and micro-finance platform (Go, PostgreSQL, Redis, Flutter, FastAPI), with an automated double-entry ledger and a budget-pacing engine that enforces non-withdrawable daily meal caps and M-Pesa top-up allocations.
- Implemented real-time inventory locking with Redis (Redlock) and a QR-code verification flow, enabling zero-friction order fulfillment and instant vendor settlements at the counter.

EDUCATION

Zone01 Kisumu — Software Engineering Intensive

Egerton University — B.Sc. Computer Science
